Professional Summary

An ambitious and driven Data Science student specializing in Machine Learning, MLOps pipeline development, and full-stack AI integration. Proven experience deploying scalable applications using Python, FastAPI, Flask, and automation platforms like n8n. Combines strong academic foundations in systems programming with hands-on industry experience from multiple data internships to build robust, production-ready intelligent systems.

Core Skills

MLOps & Pipeline Development

Model Deployment, End-to-End ML Pipelines, MLOps Workflow Optimization, FastAPI Integration

Programming Languages

Python, C, C++, SQL, HTML/CSS, JavaScript

Data Science & AI

Machine Learning, Predictive Modeling, Exploratory Data Analysis (EDA), Statistical Testing

Frameworks & Tools

FastAPI, Flask, Supabase, n8n (AI Automation), Git, Linux, pthreads, inotify API

Soft Skills

Critical Thinking, Complex Problem-Solving, Team Collaboration, Technical Communication

Professional Experience

Data Analyst Intern

Noetic Technologies PVT Ltd

02/06/2026 – 10/08/2026

- Performed advanced Exploratory Data Analysis (EDA) and statistical testing on complex datasets to extract actionable business insights.
- Designed and optimized SQL queries to aggregate and clean data, reducing data retrieval latency for reporting.
- Collaborated with cross-functional teams to build data visualizations that translated technical findings into clear business strategies.

Data Management Intern

Noetic Technologies PVT Ltd

16/06/2025 – 16/07/2025

- Managed data ingestion and preprocessing pipelines utilizing Python to ensure high data integrity and consistency.
- Structured and maintained relational database schemas, automating routine data validation and cleaning tasks.

Education

Bachelor of Science in Data Science

Pak-Austria Fachhochschule Institute of Applied Sciences and Technology (PAF-IAST)

2028

- Current Status: 5th Semester Student
- Relevant Coursework: Artificial Intelligence (AI), Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), Operating Systems (OS), Design and Analysis of Algorithms (DAA), Applied Statistics.

Interests & Extracurriculars

- Continuous learning in MLOps architectures and building Agentic AI applications.
- Active participant in competitive sports, specifically cricket.

Technical Projects

SentinelFS: Multithreaded Linux File Management System

Core Technologies: C, POSIX Threads (pthreads), inotify API, Linux Systems Programming

- Developed a high-performance Linux system utility designed to monitor directories in real-time and automatically categorize incoming files.
- Utilized the Linux inotify API to capture file system events and implemented a multi-threaded architecture with pthreads to handle concurrent file sorting asynchronously.
- Optimized file I/O operations, ensuring zero-latency organization of downloads and system documents into dynamic, type-specific directories.

Certificates

- **Develop Production-Ready ML APIs with MLOps** | *Coursera*

- Issued: June 18, 2026
- Focused on building, containerizing, and deploying production-grade Machine Learning APIs using frameworks like FastAPI.

- **Machine Learning Credential** | *Cisco Networking Academy*

- Issued: April 11, 2026
- Advanced coursework covering supervised/unsupervised learning algorithms and predictive statistical modeling paradigms.

- **Data Analyst Job Simulation Certificate** | *Deloitte*

- Issued: January 1, 2026
- Completed a professional simulation program solving real-world corporate data challenges, optimizing business workflows, and managing data pipeline analytics.

University Management Autonomous AI Agent & Portal

Core Technologies: n8n, Python, Web Frameworks, Google Workspace APIs

- Engineered an autonomous AI chatbot designed to manage and streamline daily university administrative tasks.
- Built a custom frontend portal allowing users to seamlessly track class schedules, instructor availability, department updates, and campus cafe menus.
- Integrated backend logic using n8n workflow automation to sync real-time scheduling data with conversational AI agents, drastically reducing student friction.

Full-Stack Movie Recommendation System

Core Technologies: Python, Flask, Supabase (PostgreSQL), Jinja2, Data Structures & Algorithms

- Designed and deployed a complete, user-centric web application delivering personalized movie recommendations.
- Implemented custom sorting and filtering algorithms (utilizing advanced Data Structures) to optimize backend search mechanics and recommendation retrieval.
- Leveraged Supabase for secure user authentication and scalable cloud database management, binding it with a clean Flask-driven UI.

Malarial Infection Prediction Model

Core Technologies: Python, Scikit-Learn, Pandas, Statistical Modeling

- Developed a predictive Machine Learning model specialized in analyzing healthcare trends and predicting malaria infection risks within Pakistan.
- Conducted rigorous data preprocessing, feature engineering, and handling of imbalanced regional medical datasets.
- Trained and evaluated classification models to achieve high accuracy, showcasing the potential of AI-driven epidemiology in public health.
